# Introduction to “AAROGYAPATH” website

The vision of this initiative is to set up an information management and forecasting databases platform at national level to capture demand and supply scenarios for key items required to address the national healthcare needs in the current pandemic scenario as well as future normal and epidemic scenarios.

The intelligent back end of the platform will not only track demand and supply scenarios for items in healthcare categories but also their first-level components, using unique capabilities of the Council of Scientific and Industrial Research (CSIR), India's premiere autonomous publicly funded research organization. This holistic and comprehensive way of capturing data will help in not only ensuring availability of competitive information 24x7 for creating business opportunities but will also be helpful in effective handling of pandemics like the present COVID-19 at national level.
